protection against
illegal immigrants

The transport of illegals through freight becomes a more and more important issue

Many truck drivers are afraid of violence, theft, smuggling and illegal immigration. These are some of the topics where they unwillingly could be involved. The growing pressure from the various professional organizations for safe parking spaces, f.i. as well as the increasing amount of articles in the press about frontier criminality, show that the situation becomes critical.

Organized gangs use freight as transport for transporting illegal immigrants. The driver is ignorant as well as the owner of the truck. Illegal immigration with trucks causes even more a problem, not only because of the pollution and damage of the load, but also because of the important controls and fines to be paid. Besides, there are the delays and important administrative workload related to such incidents. During the night, illegals crawl into the truck, on parking places, gas stations, ... while the driver sleeps, is going to eat, is ignorant.

B.Alert is an intelligent warning system detecting any intrusion of the load.

B.Alert is the result of the measurement of external vibrations and sophisticated algorithms.

B.Alert consists of two main elements: detectors on the trailer, and a central communication unit and detector in the cabin of the truck. This is a wireless system. The module on the trailer is attached with magnets, and can be moved easily to any other trailer as needed. In case of intrusion, various alerts can be provided: just logging, a loud alarm, a silent alarm to a call center, e.g. from the track and trace company, or a silent alarm to the drivers' GSM/GPS/3G, or to the responsible monitoring of the parking.
